Heavenly Scent Ultrasonic Ionizer Aromatherapy Diffuser

Our Ultrasonic Aromatherapy Diffuser can ionize and completely break the essential oil into tiny micro particles and disperse it into air.

The unit comes with 6 reusable diffuser refill cups.

Our Ultrasonic Aromatherapy Diffuser is a state-of-the-art system that ionizes essential oil molecules into the air while enhancing the oil's biological effect—ideal for improving the atmosphere of any home or workspace! As well, our heat free diffusion process constitutes the most effective method for essential oil distribution, as the dispersed oil/water molecules remain suspended longer in the atmosphere, do not cause irritation and penetrate better in the respiratory system.

Through water and ultrasonic vibration (2.5 million vibrations per second) our Ultrasonic Aromatherapy Diffuser completely breaks the essential oil into tiny micro-particles, dispersing the oil into a fine mist. This method enables the body, mind & spirit to benefit from the oil as you breathe in its wonderful aroma. The tiny molecules are more easily absorbed by the lungs for a greater therapeutic effect.

No heat is used in the Ultrasonic Aromatherapy Diffuser's process as heat causes rapid evaporation of the oil's more volatile components, which can then result in a loss of fullness of the natural aroma and its healing effect. Heat may alter or destroy certain constituents of the oil and thus the therapeutic benefit may not be as optimal as using a cold air diffusion method.

By using our "instant vapor technology" you can immediately enjoy the benefits of aromatherapy. Our system is the most powerful and therapeutically effective means of dispersing essential oils into an extremely fine mist of micro-particles without using heat.

Most manufacturers do not recommend using thick essential oils such as Patchouli, Sandalwood or Ylang Ylang in their diffusers, due to the possibility that they can clog the diffuser's injector. Our Ultrasonic Aromatherapy Diffuser is able to completely break down thick oils into tiny micro-particles without any problems. Also, most other diffusers use a heat process, which is known to alter or destroy the oil's healing benefits. Our Ultrasonic Aromatherapy Diffuser uses a heat-free process, which is a revolutionary and patented "Diffusion Method Technology."

The Ultrasonic Aromatherapy Diffuser offers an advanced built-in interval timer. This latest innovation has a two-way switch, allowing you to continuously scent your environment or choose an intermittent cycle (15 seconds on, 30 seconds - 2 minutes off) to maintain aromatic pleasure while saving precious oils. Over time our nervous system adapts to continuous odors causing awareness of the fragrance to be lost. The cyclic administration of our Diffuser heightens the aromatic experience and strengthens the biological effect. The timer can also be programmed for up to 9 hours of uninterrupted diffusion—ideal for home, store or clinic use!

As well, the reusable plastic cup needs no maintenance or additional care. Simply clean or replace the plastic cup when dirty (additional cups are sold separately). Many diffusers are difficult to clean or have expensive glass, breakable diffuser parts or unsanitary refill pads to invest in.

Our Ultrasonic Aromatherapy Diffuser is not only a diffuser but also a Negative Ionizer and humidifier, 3 systems in one!

Other Benefits of the Diffuser:

- * The heat-free diffusion process completely breaks down the therapeutic essential oil into tiny micro-particles; thereby dispersing a fine mist of oils that can easily be absorbed by the body for maximum benefits.
- * The Ultrasonic Aromatherapy Diffuser purifies the environment and minimizes airborne pollutants, making it the best choice to create a pleasant aromatic atmosphere indoors.
- * An automatic shut-off feature is activated when water reaches the minimum level. The Ultrasonic Aromatherapy Diffuser is a safe and quick method of essential oil diffusion.
- * Water with a few drops of therapeutic essential oil is simply and quickly distributed via the Diffuser's ultrasonic vibration (2.5 million vibrations per second), which completely breaks the oil into micro-particles. This enables the body to use the healing ionized water/oil particles as you breathe in their wonderful aroma.
- * Built-in interval timer enhances the effectiveness and economy of the essential oils
- * Better air improves your health, energy and mood—use the Ultrasonic Aromatherapy Diffuser for maintaining optimum wellness!

Instructions

Heavenly Scent Diffuser -Quick Tips

Locate the vertical lines inside the base of the unit. Pour tap water into the base until it reaches the top of the lower line. * There must be water underneath the cup in order for the diffuser to work properly.

Insert soft cup into the base.

Pour tap water into the soft cup so that it reached the top of the second line. Do not use distilled water.

Add your essential oil or mixture.

Put the wind shield cover (round plastic dome) on top of the cup. Please the square cover with nozzle over the unit.

Make sure the plus is inserted firmly into the unit. Check this each time you use your diffuser, especially after cleaning or moving the unit.

When cleaning the Heavenly Scent Diffuser, unplug the adaptor and use a fold damp cloth to wipe the inside and outside of the unit. Make sure that you clean the silver chip in the bottom of the tank. To further clean the muzzle or covers, use warm soapy water and towel dry. Do not put any parts into the dishwasher or immerse the Heavenly Scent base unit in water.
